

### The use of Acugraph to provide long –term symptoms relief of TMD

**Omranomarturbi BDS, M:PH, PHD**  
**Lecturer: Prostodontic department**

Temporomandibular disorder (TMD) is a collective term used for a number of clinical problems that involve the masticatory muscle, Temporomandibular joint (TMJ), and/or associated structures

The ( Acugraph) directs how the information obtained from the patient scanning and clinical exam can be used to select the most cost-effective evidence therapies that have the greatest potential to provide long-term symptom relief for each patient . The AcuGraph® Digital Meridian Imaging™ system is a computerized tool used to analyze and document the energetic status of the acupuncture meridians.

According to the Acugraph scanning results to the patient we have nine alternatives treatment to the case, But the Auricular 3-D protocol which has the most cost effective impact-based therapies and have the greatest potential to provide long-term symptom relief for each patient.
